

Institutional Disaster Recovery Plan

(OAR 580-055-0050-7)

The purpose of this section is to outline the Disaster Recovery Plans that are in place or in progress.

Disaster Recovery is part of planning for every department at EOU. The overall campus plan envisions coordination in an emergency, with the expectation that University departments are ensuring the survivability of their critical assets, maintain the functioning of their critical assets as long as possible, and will be able to resume their normal function after the emergency is over and the recovery begins. For information security there are two critical areas where planning is required to meet these objectives: the Banner System and the campus communications systems.

The Banner System is maintained by OUS in Corvallis, Oregon with its own disaster recovery plan.

Information Technology is responsible for both the phone and data networks on campus and maintains a disaster plan for those networks. The current copy is managed by the Network Systems Manager and the Director of Information Technology.
